## Foreword

WITH THE enactment of Medicare, utilization review became a national requirement for third-party reimbursement of certain health care costs. The 1972 Amendments to the Social Security Act authorized the establishment of Professional Standards Review Organizations (PSRO's), which will be responsible for assuring that services furnished by or in institutions are medically necessary, are provided in accordance with recognized professional standards of care, and are furnished in the most efficient and economical manner consistent with quality care. Retrospective review of patterns of inpatient care are or will be an important part of utilization review and PSRO activities.

To aid in studying hospital utilization patterns, this report presents national and regional data for 1971 on the number of discharges of persons aged 65 and over from short-stay hospitals, the mean and median length of stay and the percentile distribution of days of care for selected diagnoses and surgical procedures. For each diagnosis, data are presented for selected discharge characteristics: age, the presence of secondary or complicating conditions, and whether or not surgery was performed. For each surgical procedure, data are presented by age, and the presence of secondary or complicating conditions.

For diagnoses, similar data for 1970 were published in an earlier report, *Medicare: Health Insurance for the Aged, 1970: Length of Stay by Diagnosis*, Washington, D.C., 1973. Data for selected surgical procedures are presented for the first time in this report.

This report was prepared in the Division of Health Insurance Studies, Office of Research and Statistics, Social Security Administration, under the supervision of Howard West, director, and Aaron Krute, deputy director, Program Statistics. Text preparation was the responsibility of Penelope L. Pine of the Program Statistics Staff. Contributions to the tabulation and presentation of the statistical content of this report were made by Winston O. Edwards of Management Statistics and Robert M. Dickerson of Data Management. The General Tables were produced by the "System for Automated Tabular Composition," a computer system at the Social Security Administration Headquarters in Baltimore, Maryland. They were set on Linotron equipment at the Government Printing Office in Washington, D.C.

THIS PUBLICATION is a section of a statistical report series produced from Medicare program records. Presented on a calendar year basis, describing services rendered in the year, the series includes sections on enrollment, characteristics of providers, inpatient hospital care, outpatient hospital services, home health services, physicians' and other medical services, and overall summaries.

The primary objective of these reports is to provide data required to measure and evaluate program operation and effectiveness. Benefit payment operations furnish information about the amount and kind of hospital and medical care services used by persons aged 65 and over, as well as the expenditures for such services. The applications by hospitals, extended care facilities, home health agencies, and independent laboratories to participate in the program provide data on the characteristics of such providers of services. The claim number assigned to each individual serves as the link between the program services utilized and the demographic characteristics of each individual recorded in the health insurance entitlement master file.

The data-collection system has two inherent characteristics that determine the scope, detail, and flexibility of the available data. First, data are collected and maintained on an individual basis so that the beneficiary and his medical experience under the program form the basic unit. Second, records for each bill paid under the program and, for a sample of beneficiaries, records of diagnoses and surgical procedures are maintained on a centralized basis. Except for intermediary operating statistics such as those relating to workloads, costs, and the like, all program statistics are centrally prepared.

## THE BASIC RECORDS

The statistical system is based on five related computer-tape records: the health insurance entitlement master file, provider record, hospital insurance (part A) utilization record, medical insurance (part B) payment record, and the record containing information from medical insurance bills for a 5-percent sample of supplementary medical insurance enrollees.

### THE HEALTH INSURANCE ENTITLEMENT MASTER FILE

The health insurance entitlement master file identifies each aged person eligible for health insurance benefits and indicates whether he is entitled to hospital benefits, to supplementary medical insurance benefits, or to both of these benefits.

This record is used to create a health insurance card that is sent to each insured person. The card contains the individual's claim number (the number used for OASDI or railroad retirement programs). It indicates the entitlement of the individual for the two parts of the Medicare program.

The entitlement record provides the population data for each part of the program and therefore serves as the base for the computation of a variety of utilization rates, limited only by its demographic content.

## PROVIDER RECORD

Every hospital, home health agency, extended care facility, and independent laboratory must apply for participation in the hospital insurance program in order to be reimbursed for services provided. Data included on the application forms have been recorded in the central provider record and are updated as facilities are recertified periodically, as new ones apply for participation, or as some leave the program. When the information in this provider file is combined with utilization data, it serves to relate the characteristics of facilities and agencies that provide care to the kinds and amounts of service used by persons insured under Medicare.

## UTILIZATION RECORD FOR HOSPITAL INSURANCE

The administration of the hospital insurance program requires that two items of information be known about each person at the time of his admission to a hospital—his entitlement under the program and the extent to which he had used the benefits available to him under the "benefit period" concept.

When the patient is admitted to a hospital, the admission section of the inpatient hospital admission and billing form is completed by the hospital and forwarded through its intermediary to the Social Security Administration for recording in the central record. As soon as the record is checked, normally in less than 24 hours, the intermediary is informed of the patient's benefit status and of the number of days remaining during the "benefit period."

This information is then forwarded to the hospital. At discharge, the hospital completes the billing section of the form and sends it to the intermediary for payment. When approval for payment has been made, the intermediary forwards the claim to the Social Security Administration for inclusion in the central record.

# the Medicare Program

As part of this process, information on diagnoses and surgical procedures are coded for a 20-percent sample of beneficiaries based on specific combinations of digits in the health insurance claim number. Copies of admission and billing forms are handled in a comparable manner by home health agencies and extended care facilities. The outpatient billing form is also transmitted to the Social Security Administration for recording in the central record after the bill is approved for payment by the intermediary.

All the information on utilization experience in hospital and extended care facilities that is needed to administer the "benefit period" provision is recorded in the central record. This information includes stays in certain nonparticipating institutions that meet the definition of a hospital or extended care facility under the law, and days of care not covered or reimbursable under the program.

Each admission and billing form contains both the beneficiary's claim number and the provider's identification number. The resulting tape record can be readily matched to the beneficiary files and the provider files. By this process, a statistical tape record is created for the sample of insured persons that contains all the available information needed for tabulation from the three files related to part A utilization.

## PAYMENT FOR MEDICAL INSURANCE

Payment or reimbursement under the SMI program is made only after receipt by the carriers (intermediaries involved in Part B of the Medicare program) of bills having allowed charges exceeding \$50 during a calendar year period.

For the insured population, carriers need to know from a central source that the deductible has been met; thereafter, during the remainder of the calendar year, the only additional information required from the Social Security Administration for reimbursement or payment purposes is whether the person is still enrolled under the SMI program.

For administration and operation of the program, the Social Security Administration must have accurate and complete information on the amounts paid by the carriers for physician services and for other services and supplies under this part of the program. To meet these needs, carriers furnish a payment record consisting of tape, punched card, or other machine-readable record of each bill paid. A "bill" is defined as a request for payment from or on behalf of a beneficiary as the result of services provided by a single physician or supplier.

The payment record also contains selected items of information needed to supply an efficient basis for drawing samples of the bills. These items provide a sampling frame that may be used to draw additional samples designed to obtain specific information not furnished reliably by the basic sample of enrolled persons under the medical insurance program.

## THE MEDICAL INSURANCE SAMPLE

Although the payment record provides a rapid method for summarizing payment data and a sampling frame for efficiently drawing additional samples of bills, it does not provide specific data on diagnoses, procedures, and related charges.

Basic statistics on the utilization of physician and other services covered under the supplementary medical insurance program are derived from bills paid by intermediaries to or on behalf of a continuous 5-percent sample of all enrolled persons. Intermediaries have been given specific combinations of digits of the health insurance claim number to be used in selecting the 5-percent sample, which is a sub-sample of the 20-percent sample used for hospital insurance program data.

Bills are submitted either directly on an SSA request for payment form, or on the SSA form in combination with the physicians's billing form. Both methods are designed to provide information on the date and place of each service, the procedure carried out or service provided, the condition treated (diagnosis), and the physician's or supplier's charge for the specific service.

All of the bills of persons in the 5-percent sample to or for whom payment is made under the program, including those used to meet the annual \$50 deductible, are included in the sample and coded. However, data are not available through these procedures for persons in the sample who do not meet the \$50 deductible. Such data are collected by means of the Current Medicare Survey, with data made available in a separate report series.<sup>1</sup>

For hospital-based physicians who have authorized the provider to collect the fee for their services, the provider billing for patient services by physicians form is used. This form is completed for each patient. It includes descriptive information on the date and place of each service, the diagnoses, procedures, and the charges. These bills are received centrally for the 5-percent sample of persons enrolled for supplementary medical insurance.

# Discharges from Short-Stay Hospitals for Selected Diagnoses, Surgical Procedures and Discharge Characteristics, 1971

## Introduction

The hospital insurance (HI) part of the Medicare program, effective July 1, 1966, has been providing payment for a large portion of the costs of inpatient hospital services for the insured population aged 65 and over. In calendar year 1971, for example, Medicare reimbursements for inpatient care in short-stay hospitals totalled almost \$5.0 billion and represented more than three-fourths of the charges billed to the program for such services.

This report presents tables showing length of stay distributions for selected diagnoses and surgical procedures by census region and division for Medicare patients discharged from short-stay hospitals during 1971.<sup>1</sup> (See Notes to General Tables for composition of geographic areas.) For each diagnosis, data are reported by selected characteristics of discharged pa-

tients, including age, the presence or absence of additional (complicating) conditions, and whether or not surgery was performed (see Notes preceding General Tables for definitions). For each surgical procedure, data are reported by the patient's age and the presence or absence of additional conditions (discharge diagnoses). These factors as well as the disease, illness, or injury which was the primary cause of a person's hospitalization are important in determining length of stay and, as a result, benefit payments under Medicare.

This report presents data for 166 specific diagnoses or diagnostic groups, representing 4.81 million stays and 17 specific surgical procedures or procedural groups representing 700,000 stays for inpatients discharged from short-stay hospitals under Medicare during 1971. The figures reported were selected from some 5.7 million total discharges, including 1.7 million with surgical procedures, entered in the Social Security Administration's central records at the time the data were tabulated. Table A below summarizes the length of stay experience under Medicare for the United States, and for census regions of the total 5.7 million discharges recorded.

<sup>1</sup> Two previous reports for length of stay by diagnosis are *Medicare, Health Insurance for the Aged, 1969, Length of Stay by Diagnosis*, and *Medicare, Health Insurance for the Aged, 1970, Length of Stay by Diagnosis*, Washington, D.C.: U.S. Government Printing Office, 1973.

*Table A.—Number and percent of discharges from short-stay hospitals and the average length of stay for selected discharge characteristics, by census region, 1971*

The data in this report are derived from bills for inpatient services submitted for payment by short-stay hospitals for a 20-percent sample of Medicare beneficiaries. The data include all discharges, that is, patients discharged alive as well as those who died during hospitalization or who were transferred to other facilities. The number of reported discharges is greater than the actual number of persons discharged during the year because a person could have more than one stay during the reporting period.

When a beneficiary is hospitalized, an admission notice and subsequent bills are received by the Social Security Administration (SSA) where they are processed and placed on file. Part of this process consists of coding medical information on the bills in the sample to identify the nature of any surgery performed, and the primary disease, illness, condition, or injury responsible for the hospitalization. Information from the billing forms is matched to other master records maintained by SSA, which contain information about the characteristics of each Medicare beneficiary as well as about individual short-stay hospitals participating in the program. General and special hospitals reporting average stays of less than 30 days are included.

The data in this report are based on a sample of the approximately 5.7 million discharges from short-stay hospitals during 1971 which were recorded in SSA by January 1973. The sample counts have been multiplied by five to give an estimate of the total number of discharges recorded from a hospital as of this date. There is a lag between the time a person is discharged from a hospital and the time this information is received by SSA and posted to central records. Therefore, the counts for this report understate the total number of discharges for each diagnosis. An additional small number of discharges, approximately 30,000, were also excluded, i.e., emergency admissions to hospitals not participating in the Medicare program.

A complete count of all Medicare discharges from short-stay hospitals in 1971 would be about 6.1 million, 7 percent more than the total figure used in this study. Since this proportion represents such a small element in the universe this difference would not be expected to have a significant effect on the data. The data shown by geographic division were summarized by address of the hospital providing care, not the residence of the beneficiary. Included in the totals are the 50 States and the District of Columbia.

The data in this report are estimates derived from a sample of bills and therefore are subject to sampling variability. The effect of sampling variability will be discussed in the section on "Uses of the Data." Smaller numbers in table cells are generally subject to greater variability than larger estimates. An asterisk (\*) appears in place of the estimate in the table, where there were five or fewer cases in the sample.

Participating hospitals use standard billing forms (SSA-1453) to identify the beneficiary and specify the services rendered during the stay (see Figure 1 for a facsimile of the billing form). The billing form includes a space for the entry by the hospital of a detailed description of the patient's primary diagnosis at the time of discharge. Primary diagnosis is defined as the primary reason for the patient's hospitalization, i.e., the condition requiring the current hospitalization. Space is also provided for the entry of any secondary diagnoses. The name and date of any surgical procedure performed during the hospital stay is also recorded.

The primary discharge diagnosis on each bill in the 20-percent sample with a discharge date of January 1, 1971, or after is coded using the *International Classification of Diseases, Adapted—Eighth Revision (ICDA-8)*.<sup>2</sup> Four-digit codes are assigned for each primary diagnosis. If more than one diagnosis appears on the bill and there is no indication of which diagnosis is primary, the first diagnosis listed is coded. The only exception to this rule is when a symptom or ill-defined condition is listed first. In this case, preference is given to the more substantive diagnosis appearing second. The presence or absence of additional diagnoses is indicated by a one-digit code. Data in previous reports for years prior to 1971 were based on the Seventh Revision of ICDA.<sup>3</sup>

Surgical procedures are also coded on each sample bill on which one or more surgical procedures are reported. Codes are assigned using the *Current Procedural Terminology (CPT)* manual.<sup>4</sup> When two or more surgical procedures appear on a bill, the first listed surgical procedure is coded. However, if the first listed procedure is primarily diagnostic in nature, such as an endoscopic procedure or biopsy, coding preference is given to more serious procedures such as resections, removals, repairs, etc. The CPT defines surgery to include procedures involving incision, excision, amputation, introduction, endoscopy, repair, destruction, suture, manipulation, and surgical collapse therapy.

The CPT was changed somewhat from its published format to meet the needs of the Medicare program. In addition, descriptions of surgical procedures that were worded differently than the rubrics in the CPT were often reported on bills. If the description for a particular procedure occurred often enough, it was added to the CPT for coding purposes. For these additions, care

<sup>2</sup> *International Classification of Diseases, Adapted for Use in the United States*, Public Health Services Publication No. 1693, Volumes 1 and 2, U.S. Department of Health, Education, and Welfare.

<sup>3</sup> For a discussion of the differences between the two classifications, see *Monthly Vital Statistics Report*, "Provisional Estimates of Selected Comparability Ratios Based on Dual Coding of 1966 Death Certificates by the Seventh and Eighth Revisions of the International Classification of Diseases," Volume 17, No. 8 Supplement, October 25, 1968, National Center for Health Statistics.

<sup>4</sup> *Current Procedural Terminology*, First Edition, American Medical Association, Chicago, 1966.

was exercised to assure that the CPT numerical code categories were not changed, i.e., the definitions of specific codes were neither broadened or narrowed by the additional descriptive entries.

Medical coding is done by personnel of the Social Security Administration who have completed special training in anatomy and medical terminology and the use of the statistical coding manuals. Also, review of the coding is carried out with the assistance of skilled personnel including medical record technicians and registered record librarians.

## Uses of the Data

The presentation of length of stay patterns in this report is intended to aid in the examination of hospital utilization by providing statistics which can be used to reflect the experience of hospitals in various parts of the country under the Medicare program. Individual hospitals or other organizations involved in reviewing hospital utilization can use the data as a guide to expected or typical lengths of stay patterns in hospitals in their geographic area and can compare their own figures with those reported.

Average length of stay for a group of comparable cases is a traditional measure of typical hospital practice. To make comparisons of the duration of average stays, individual hospitals might consider the figures for a particular geographic area as the "population" with which patients with specific diagnoses and discharge characteristics are to be compared. Table B can be used to determine whether average lengths of stay in individual hospitals differ significantly from those shown for the geographic area in which the hospital is located. For example, suppose an individual hospital in Massachusetts has five cases in a specific diagnostic, age, etc., category with an average length of stay of 10 days. This hospital wishes to compare its data with that for the geographic division in which it is located. From this report it is shown that the average length of stay for the same specific diagnostic, age category in the New England States was 8 days. It is assumed that

the cases from individual hospitals represent a sample of the "population" reported for the geographic area.

The standard error for a sample of five cases with an average length of stay of 8 days is found to be 3.6 days using table B. Since 8 days is not one of the average lengths of stay shown in the table, linear interpolation is used to arrive at the standard error, i.e.,  $(8-7)/(10-7) = 1/3$ . This figure applied to the difference in the respective standard errors  $(4.5 - 3.1)$  gives  $1/3 (1.4) + 3.1 = 3.6$  days. The difference between the observed cases of 10 days and the hypothesized length of stay from the regional data (8 days) is 2 days, well below the standard error of 3.6 days. The observed difference would not be regarded as significant since the difference could be attributable to chance factors alone. In fact, given a sample of five cases the observed difference would be significant at the 95 percent confidence level only if it exceeded 7.2 days or two standard errors.

Table B may also be used for the construction of confidence intervals for the tabled values of length of stay. For this purpose, since the number of discharges shown in the General Tables are the inflated sample numbers, it is necessary to divide these by five to secure the actual size of sample for entering Table B.

Percentiles are also provided in the General Tables for each patient group to give some indication of the variability of the length of stay data. If the 75th percentile shown in the tables for a particular diagnostic, age, surgical group is 9 days, then 75 percent of the patients in that group stayed 9 days or less. Similarly, if the 90th percentile is 14 days, then 90 percent stayed 14 days or less.

The percentile distribution may be used as a screen to identify cases with unusually long or short lengths of stay. Long lengths of stay may indicate possible over-utilization. Thus, hospitals may wish to look at every case in a particular group where the length of stay exceeds the figure shown in the tables for the 90th percentile. Very short lengths of stay may indicate unnecessary admissions. Thus, hospitals may wish to look at the cases falling below the figure shown for the 10th percentile.

Table B.—Approximate standard error of mean length-of-stay

Mean length of stay (in days)	[2 chances out of 3] Number of discharges in sample

## Provisions of the Law and Regulations

The Medicare program, enacted on July 30, 1965 as Title XVIII of the Social Security Act, became effective on July 1, 1966. The program makes available two separate but coordinated insurance coverages—hospital insurance, covering nearly all persons aged 65 and over, and supplementary medical insurance, covering those persons in this age group who enroll voluntarily and pay the premium.

### Hospital Insurance Program

The hospital insurance (HI) program pays for part of the costs of inpatient hospital care and related health care services provided by extended care facilities and home health agencies following a period of hospitalization. For the services to be covered, they must be provided by institutions and organizations which have been certified as qualified providers of services and which have signed an agreement to participate in the program.<sup>1</sup> An exception exists under special provisions for hospitals certified to provide only emergency services.

As described in more detail below, the program is financed by a tax on a portion of current earnings and, to a certain extent, by general tax revenues.

### BENEFITS

The law provides maximum limits on the benefits which may be covered under the HI program. These limits are established based on the concept of a “benefit period.” A benefit period begins with the first day of hospitalization and ends when the individual has not been a bed patient in a hospital or skilled nursing home for 60 continuous days.

Requirements for payment by the individual of an inpatient hospital deductible and coinsurance amounts also are established by law, with the Secretary of Health, Education and Welfare authorized to set the deductible amount each year in accordance with a speci-

fied procedure. By law, the deductible amount automatically determines the coinsurance amounts for each type of service under the HI part of the program.

*Inpatient hospital benefits.*—Covered hospital services include room and board in accommodations containing from two to four beds, nursing services (except for private-duty nursing), drugs and biologicals, and all those services ordinarily furnished by a hospital to its inpatients. The program does not cover the services of physicians (including staff radiologists, anesthesiologists, pathologists and physiatrists) except for services provided by interns or residents under approved teaching programs in a hospital.

The program pays for the “reasonable costs” of covered services in a participating hospital for up to 90 days in a “benefit period.” Full payment is made for the first 60 days of hospitalization less the deductible of \$60 for services received in benefit periods starting in 1971. For each of the remaining 30 days in the benefit period, the patient pays a coinsurance amount of \$15 a day (one-fourth of the inpatient hospital deductible).

Each hospital insurance beneficiary also has a “lifetime reserve” of 60 additional hospital days, which can be used at his option whenever he has exhausted the 90 days covered in a benefit period. Lifetime reserve days are subject to a copayment of \$30 a day (one-half of the inpatient hospital deductible).

The cost of the first three pints of blood (or equivalent amounts of packed red blood cells) furnished a patient during a benefit period is also deductible unless the patient arranges for replacement. Charges for any additional blood are covered under the program.

The program also pays for emergency services in a nonparticipating hospital. Each nonparticipating hospital providing emergency services elects whether to claim payments from the Medicare program or from the beneficiary for emergency services rendered beneficiaries in a given year. If the hospital elects to bill the program, reimbursement is made under the program as described above. In other cases, the beneficiary claims direct payment and submits the itemized bill to Social Security Administration. In this case, reimbursement is based on reasonable charges for covered services and amounts to 60 percent of reasonable charges for room and board plus 80 percent of such charges for ancillary services. Payment is subject to the deductible and coinsurance provisions of the law.

<sup>1</sup>For certification requirements see Social Security Administration, *Medicare: Health Insurance for the Aged, 1968, Section 3: Participating Providers* (Washington, D.C.: U.S. Government Printing Office, 1971).

Inpatient tuberculosis and psychiatric hospital services are covered as hospital insurance benefits. However, there is a lifetime limit of 190 days of care in a psychiatric hospital. Where an individual is a patient in a participating psychiatric hospital at the time he becomes entitled to hospital insurance, the number of days he was such an inpatient in the 150-day period immediately prior to his eligibility are deducted from his days of entitlement to inpatient psychiatric care in that benefit period but not from the lifetime limitation.

*Extended care facility benefits.*—Covered extended care services may include nursing care; bed and board; physical, occupational or speech therapy; drugs and biologicals; medical services of an intern or resident-in-training of a hospital having a transfer agreement with the extended care facility (ECF); and other necessary health care services generally provided by extended care facilities.

The program pays for the reasonable cost of all covered inpatient services in participating ECF's for up to 100 days in a benefit period. Benefits are payable only following discharge from a hospital after a stay of 3 consecutive days or more, provided admission to an ECF occurs within 14 days of discharge. Full payment is made for the first 20 days. For each of the remaining 80 days, the patient pays a coinsurance amount of \$7.50 a day (one-eighth of the inpatient hospital deductible) as required by law.

*Post-hospital home health benefits.*—Covered home health services may include part-time or intermittent nursing care; physical, occupational, or speech therapy; part-time or intermittent services of a home health aide; medical supplies (other than drugs and biologicals) and the use of medical appliances; and, in certain cases, services of an intern or resident-in-training of a teaching hospital. The services must be furnished by or under arrangements of an approved home health agency.

Coverage under HI provides for payment of the reasonable cost of up to 100 home health visits after the beginning of one benefit period and before the beginning of the next. In addition, the visits must occur in the year following a beneficiary's most recent discharge from a hospital stay of at least 3 consecutive days or from a covered ECF stay. A home health plan must be established by the patient's physician within 14 days after the hospital or ECF discharge. The home health services must be necessary for further treatment of a condition for which the patient received services in the hospital or ECF.

## Supplementary Medical Insurance Program

The supplementary medical insurance (SMI) program provides coverage for a variety of medical services and supplies furnished by physicians or others in connection with physicians' services. Individuals 65 years of age and

over may enroll in the program regardless of whether they are eligible for monthly social security benefits. Premiums are paid by or on behalf of all enrollees, and are matched by the Federal government from general revenues.

### BENEFITS

Physicians' services covered under the program include home, hospital, and office visits. The program also pays for other services and supplies, such as: drugs and biologicals that cannot be self-administered if they are furnished as a part of a physician's professional service; diagnostic X-ray tests, diagnostic laboratory tests, and other diagnostic tests; X-ray, radium, and radioactive isotope therapy, including materials and the services of technicians; surgical dressings, splints, casts, and other devices used for reduction of fractures and dislocations; purchase or rental of durable medical equipment such as oxygen tents, hospital beds, and wheel-chairs used in the patient's home (including an institution used as his home); ambulance service where the use of other methods of transportation is contraindicated by the individual's condition; prosthetic devices (other than dental) that replace all or part of an internal organ; leg, arm, back, and neck braces; artificial legs, arms and eyes, including replacement if required because of a change in the patient's physical condition; and home health visits provided by a certified home health agency in accordance with a home health plan established by the patient's physician (no prior hospitalization is necessary). Payment may be made up to 100 home health visits in a calendar year without regard to similar services received under the HI program.

Also covered are hospital services incident to physicians' services rendered to outpatients, and outpatient physical therapy services.

In each calendar year a deductible of \$50 must be satisfied before payment may be made under the SMI program (with one exception noted below). Bills count toward the deductible on the basis of incurred rather than paid expenses; only charges allowed under the program count towards the deductible. To preclude the possibility of a beneficiary having to meet a deductible twice in a short period of time, a "carryover" provision is applied. Accordingly, covered expenses incurred in the last quarter of the year and counted towards the deductible in that year are also credited toward the deductible for the following year.

After the deductible has been met, the SMI program pays for 80 percent of the allowed (reasonable) charges for covered physician services and most other medical services. However, deductible and coinsurance requirements do not apply to the services of radiologists and pathologists furnished to hospital inpatients. "Reasonable" charges for such services are completely reimbursed. Hospital services incident to outpatient care, and home health services are subject to the deductible, and are reimbursed on the basis of 80 percent of reasonable costs.

The law sets special limits on the payment which may be made for outpatient treatment of mental illness: recognition of incurred expenses is limited to the lesser of \$312.50 or 62.5 percent of actual expenses in a calendar year. Since only 80 percent of allowed charges may be reimbursed, the effect is to limit payment to \$250 or 50 percent of the allowed charges in any year after the deductible has been met, whichever is less.

## Eligibility

*The hospital insurance program.*—Almost all persons aged 65 and over are eligible for benefits under the hospital insurance program. Included are those persons in this age group who are entitled to monthly social security cash benefits or payments from the railroad retirement system. Further, a special transitional provision provides eligibility for certain persons who do not qualify for monthly cash benefits on the basis of their own wage record or as a dependent or survivor of an insured worker. The provision applies, generally, to persons age 65 or over who (1) attained age 65 before 1968 or (2) attained age 65 after 1967 with not less than three quarters of social security coverage, whenever acquired, for each calendar year elapsing after 1966 and before the year in which he attains age 65. For persons who reach age 65 after 1968, the amount of work credits (quarters of coverage) needed increases by three quarters each year—six quarters are needed by those who reached age 65 in 1969, nine by those who reached age 65 in 1970 and so on.

Federal employees who retired from the Federal service after July 1, 1960, and who had the opportunity to be covered under the Federal Employees Health Benefits Act of 1959, are ineligible for hospital insurance benefits under the transitional provisions. Also ineligible are aliens with less than 5 years of continuous residence in the United States, and those persons convicted of crimes against the security of the United States.

Hospital insurance protection can be retroactive for as many as 12 months before the month an individual files his application for entitlement. For example, an individual may apply 11 months after he attains age 65 and still be entitled to benefits from the month he attained age 65.

*Supplementary medical insurance.*—Persons entitled to benefits under the hospital insurance program, retired federal employees, and persons not eligible for hospital insurance under the transitional provisions may voluntarily participate in the SMI program.

*Enrollment.*—Individuals may enroll in the SMI program only during specified periods—the initial and the general enrollment periods. The initial enrollment period begins with the third month preceding the one in which an individual attains age 65 and ends 3 months after the month of attainment, a total period of 7 months. If he enrolls during the 3 months prior to the month in which he attains age 65, his coverage is effective

with the month in which he attains age 65; if he enrolls during the month he attains age 65, his coverage begins the following month; if he enrolls in any of the 3 months after he attains age 65, his coverage begins from 2 to 3 months after enrollment, depending on how long he waited before enrolling.

Beginning with 1969, there are general enrollment periods from January 1 through March 31 of each year for those who did not enroll in their initial enrollment period, or who previously terminated their enrollment and wish to re-enroll. For 1969 and later years, a person who enrolls during a general enrollment period becomes covered under SMI beginning with July 1 of the year in which he enrolls. An eligible individual must enroll within 3 years after the end of his initial enrollment period or within 3 years after termination of prior enrollment. Re-enrollment is allowed only once.

A State may enroll otherwise eligible individuals who receive cash payments under public assistance programs or are otherwise eligible for medical assistance under Title XIX if a) prior to January 1, 1970 the State requested that a State-Federal enrollment agreement be established and b) the State pays the necessary premiums. Enrollment terminates with the beginning of the month following the month of death. Social Security and railroad retirement beneficiaries may give notice of their desire to withdraw from the SMI program at any time and their coverage will be terminated at the close of the following calendar quarter. Other enrolled persons may terminate their coverage by withholding payment of premiums or by notifying the Social Security Administration in writing of the desire to withdraw from the program. The enrollee is provided a 90-day grace period for the payment of overdue premiums after which coverage is automatically terminated.

## Financing the Program

*Hospital insurance.*—The hospital insurance program is financed primarily through a schedule of increasing tax rates on a portion of current earnings in employment covered under the Social Security Act. The maximum amount of annual earnings to which the rates are applied began at \$6,600 for calendar year 1966; it increased to \$7,800 effective with 1968 and \$9,000 beginning with 1972.

The same tax rate applies to employees, employers, and self-employed persons. The rate was 0.60 percent for each year 1968-72. The proceeds of this tax, and monies collected from the railroad retirement system (with respect to the coverage of railroad retirement beneficiaries) are placed in a Hospital Insurance Trust Fund from which reimbursement for all benefits and administrative expenses incurred under the hospital insurance program is made. The Hospital Insurance Trust Fund is reimbursed from general tax revenues for the cost of providing coverage for the persons who qualify for hospital insurance under the transitional provisions. For 1971, there were about one million such persons, a decrease from the 2.6 million who so qualified in 1966.

*Supplementary medical insurance.*—Premiums are paid into the Federal Supplementary Medical Insurance Trust Fund by those persons enrolled for supplementary medical insurance (or on their behalf), and a matching amount is paid by the Federal Government from general revenues. Benefits and administrative costs are paid from monies in the SMI Trust Fund.

The premiums of persons receiving social security cash benefits, railroad retirement, or Federal Civil Service annuities are deducted from their monthly benefit checks. Persons not receiving monthly benefits are billed quarterly for premiums by the Social Security Administration or the Railroad Retirement Board and have a 90-day grace period in which to make payment. Premiums may be paid for as long as a year in advance, and for individuals financially unable to make quarterly payments, arrangements can be made for monthly payments.

*Amount of premium.*—The Secretary of HEW is directed by law to determine the SMI basic premium rate on an annual basis. The dollar amount is required to be sufficient to produce revenue equal to one half of the expected benefit and administrative costs payable under SMI during the period for which the premium rate applies. The rate is determined in December of each year and is applicable for 12 months beginning with the following July.

The premium rate in the first half of 1971 was \$5.30 per month. The rate was raised to \$5.60 effective July 1971.

## Administration of the Program

*Hospital insurance.*—Under the hospital insurance part of the program, groups or associations of providers, on behalf of their members, may nominate a national, State, or other public or private agency or organization to serve as intermediary in the claims process. A member of an association is free, however, to receive payment from an approved intermediary other than its association's nominee, if approved by the Secretary and agreeable to the intermediary selected. In addition, a provider may deal directly with the Social Security Administration.

The Secretary may enter into an agreement with a nominated organization if he finds this to be consistent with effective and efficient administration of the hospital insurance program. The intermediary makes payments to providers for covered items and services on the basis of reasonable cost determinations and assists in the application of safeguards against unnecessary utilization of covered services. The agreement may also call for (1) furnishing consultative services to assist providers to establish and maintain necessary fiscal records and otherwise qualify as providers of services, (2) serving as a center for communicating with providers, and (3) making audits of provider records. Hospital insurance intermediaries also make payments for home health and outpatient hospital services covered under medical insurance.

Requests for Medicare payment for covered services generally are submitted by the provider of services; they must be signed by the beneficiary (or someone for him, if he is unable to do so). The provider is reimbursed on the basis of reasonable costs of covered services and bills the beneficiary for deductible and coinsurance amounts as well as for services not covered by the program.

In some instances, hospitals may bill the program for physician services rendered to inpatients. In these cases, payment is made by the HI intermediary. Depending on the nature of the billing, funds are transferred from the SMI trust fund to the HI trust fund to cover the cost of these services, or are paid directly from the SMI trust fund.

The intermediary selected by the provider reviews claims for payment and pays the provider. Actual payment is made on the basis of an interim rate established between the provider and the intermediary. Final settlement for each provider's operating year is made on the basis of a cost report submitted by the provider, and subject to an independent audit.

No payments can be made to Federal facilities except for emergency services, unless the provider serves as a community institution. In addition, payment cannot be made to a provider for those services it is obligated to render at public expense under Federal law or contract.

*Supplementary medical insurance.*—Under the medical insurance program, the Secretary of Health, Education, and Welfare may enter into contracts with carriers for the performance of specified administrative functions. The carriers' principal function is to determine whether charges are allowable (reasonable) and to make payment. Carriers also have the authority and responsibility to determine, in a given case, whether a claim is for a covered service and to deny claims for noncovered or excluded items or services. In addition, carriers are to assist in the application of safeguards against unnecessary utilization of services.

The law requires that in determining allowed (reasonable) charges, carriers should take into account the customary charges of physicians and other suppliers of medical services and the prevailing charges in the locality for similar services. The law also specifies that the allowed (reasonable) charge for a service may not exceed the charge applicable for a similar service and under comparable circumstances to the carrier's own policyholders and subscribers. The allowed charge, therefore, is a charge for a service which in the absence of unusual circumstances or medical complications is the lowest of the following: (1) the actual charge of the physician or other person rendering the service, (2) the charge the physician or other person customarily makes for similar services, (3) the prevailing charges in the locality for similar services.

Customary and prevailing charges are recalculated each fiscal year based on charges in the calendar year preceding the start of the fiscal year. Beginning January 1, 1971, the upper limit of prevailing charges was set by regulation at the 75th percentile of the customary charges (weighted by frequency) made for similar services. Thus, increases in prevailing charges recognized by

the carriers beginning in January 1971 were limited to the levels established by the 75th percentile of calendar year 1969 customary charges. Similarly, increases in prevailing charges recognized by carriers beginning July 1, 1971, have been limited to the 75th percentile of calendar year 1970 customary charges.

Claims for payment of SMI benefits may be submitted to the carrier either by the patient or by the physician or other supplier of services. If the patient submits a claim (an itemized bill) directly to the carrier, he receives direct payment of benefits for covered services; he remains responsible for the physician's (or supplier's) bill. The patient may assign the benefits to a physician or other supplier of services willing to accept assignment. In this case, the physician (or supplier) agrees that the allowed or reasonable charge determined by the carrier is the total charge. The physician (or supplier) submits the bill and is reimbursed. In this situation, the patient remains responsible for the remaining 20 percent of the allowed charges for covered services and the \$50 deductible (if applicable to the current bill).

Services furnished by group practice prepayment plans (GPPP) to members are normally rendered in return for predetermined premium payments. In these cases Medicare reimbursement is made directly to the GPPP. A GPPP which exercises the option provided by law to be paid 80 percent of the reasonable cost of services (in lieu of 80 percent of the allowed charge for such services) generally deals directly with the Social Security Administration. Plans which choose to be paid on the basis of allowed charges are reimbursed by the SMI carrier.

The 1967 amendments to the Social Security Act introduced a time limit on filing of claims. For bills incurred in the supplementary medical insurance portion of the program after March 1968, claims must be filed no later than the close of the calendar year following the year in which the services are furnished. For services provided during the last 3 months of the calendar year, bills may be submitted through the end of the second year following.

# General Tables

## Notes

*Health Insurance for the Aged:* The program, commonly known as Medicare, that pays for part of the costs of hospital and medical services for participating persons aged 65 and over.

*Short-Stay Hospital:* General and special hospitals certified as participating facilities under Medicare and reporting average lengths of stay of less than 30 days.

*Discharge:* The formal release of an inpatient from a hospital. Includes those persons who died during their hospitalization, or were transferred to other hospitals.

*Length of Stay:* The number of days of care for a discharge. The day of discharge is not counted as a day of care. A hospitalization of less than 1 day (i.e., the patient is admitted and discharged on the same day) is counted as 1 day.

*Primary Discharge Diagnosis:* The illness, condition, or injury recorded on the patient's billing form by the hospital as the primary diagnosis at the time of discharge. This diagnosis is coded using the *International Classification of Disease, Adapted, Eighth Revision*.

*Age:* The number of completed years at last birthday in month of admission to the hospital.

*Percentile:* The 10th, 25th, 50th, 75th and 90th percentiles of stay are presented. The 50th percentile is the median of the distribution. That is, half of the stays fall above and below the median of the distribution. The meaning of the percentiles can be illustrated by example: If the 10th percentile for a group of discharges is 2 days, then 10 percent of the discharges stay 2 days or less.

*With and Without Surgery:* A discharge is considered to involve surgery if any operative procedure classified as such, according to the *Current Procedural Terminology*, First Edition, American Medical Association, Chicago, Illinois, 1966, was performed during the stay. Surgery includes procedures involving incision,

excision, amputation, introduction, endoscopy, repair, destruction, suture, manipulation, or surgical collapse therapy. All other discharges are classified as "without surgery."

*Geographic classifications:* Based on the address of the hospital.

*United States:* Consists of the 50 States, and the District of Columbia, grouped in 9 census divisions, which are regrouped into 4 census regions.

*Census Regions:* Northeast, North Central, South, West.

*Census Divisions:* Northeast—New England, Middle Atlantic.

North Central—East North Central, West North Central.

South—South Atlantic, East South Central, West South Central.

West—Mountain, Pacific.

*States included in each division:*

New England—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut.

Middle Atlantic—New York, New Jersey, Pennsylvania.

East North Central—Ohio, Indiana, Illinois, Michigan, Wisconsin.

West North Central—Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas.

South Atlantic—Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida.

East South Central—Kentucky, Tennessee, Alabama, Mississippi.

West South Central—Arkansas, Louisiana, Oklahoma, Texas.

Mountain—Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada.

Pacific—Washington, Oregon, California, Alaska, Hawaii.
